

MUHAMMAD UVESH MENPURWALA

Software Engineer · Mobile & Cross-Platform Development

Ahmedabad, India · uveshmenpur.03@gmail.com · +91 9624150392 · linkedin.com/in/muhammaduvesh · github.com/uveshm003

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of commercial experience building cross-platform mobile and desktop applications. Currently at Sensit Technologies (Halma PLC), architecting and shipping enterprise-grade Flutter applications across Android, iOS, and Windows. Proven track record in monorepo architecture, hardware device integration, offline-first systems, SDK development, and release management. Experienced in BLE device communication, native platform channels, automation, and expanding into full-stack web development.

TECHNICAL SKILLS

Languages: Dart, Java, Kotlin, JavaScript, Python, C/C++, HTML/CSS

Frameworks & Platforms: Flutter (Android · iOS · Windows · macOS · Linux · Web), Jetpack Compose, Angular, Node.js, Express.js

State Management: BLoC, Riverpod, Provider, GetX

Architecture: MVVM, DDD, Monorepo (Melos), Offline-First, Modular SDK Design

Device & Integration: BLE, Platform Channels, ROS SDK, REST APIs, WebSocket / Socket.IO, Firmware Update Workflows

Databases & Storage: Hive, ObjectBox, SQLite, MongoDB, Firebase Firestore, Firebase Suite

DevOps & Tools: Git, GitHub Actions, CI/CD, n8n (Workflow Automation), Melos, Postman, Android Studio, VS Code

AI & Automation: Claude Code, AI-Assisted Development, Workflow Automation

WORK EXPERIENCE

Software Engineer · Sensit Technologies (Halma PLC)

Jan 2025 – Present | Ahmedabad, India

- Primary developer on SyncIt — a strategic platform consolidating multiple legacy Sensit applications into a single cross-platform product (Android, iOS, Windows) built with Flutter and managed via a Melos monorepo.
- Transformed a POC into a production-ready MVP; continued evolving the product through iterative feature development, architectural improvements, and client-driven enhancements.
- Architected two distinct product variants within the monorepo: SyncIt Lite (offline-first, for field evaluation) and SyncIt Plus (enterprise-grade with cloud sync, advanced reporting, and premium integrations).
- Developed and maintained a shared Core Package and a dedicated Log Parsing SDK, ensuring reusability and consistency across the platform.
- Built device communication modules for connecting with Sensit instruments — handling log download, data parsing, visualization, firmware update workflows, and multi-format export.
- Designed and implemented Windows-scheduled reporting features using LAN-connected devices; built flexible customizable export configurations for operational requirements.
- Owned the full deployment and release pipeline: build generation, versioning, packaging, and distribution across all supported platforms.
- Developed internal automation workflows using n8n; leveraged Claude Code and AI-assisted tooling to accelerate engineering productivity.
- Coordinating with global engineering teams across India, Italy, and the USA, providing updates to leadership and product stakeholders.
- Building familiarity with MEAN Stack (MongoDB, Express, Angular, Node.js) to contribute to web panel development alongside core mobile responsibilities.

Flutter Developer · Kaymatech

Jan 2025 – Present | Ahmedabad, India

- Delivered 12–15 applications across Android, iOS, macOS, Windows, and Linux for a product-focused company.
- Designed and implemented a complete In-App Purchase infrastructure for Windows, opening a new revenue stream for the organisation.
- Proposed and executed architectural changes that significantly reduced development turnaround time.
- Worked across the full product lifecycle: new product development, feature additions to existing apps, and maintenance.

Junior Mobile Consultant · Kody Technolabs Limited

Sep 2023 – Jan 2025 | Ahmedabad, India

- Served as a core developer on Dasher — a multi-display delivery robot platform consisting of 9 integrated panels; led development of 2 panels including the Main Panel (ROS SDK + Android native serial commands) and the Advertisement Panel (dynamic content scheduling, remote file transfer).
- Built Odigo — an advertisement robot with dual-mirrored displays and centralized control, using Flutter, Platform Channels, ROS SDK, and Socket.IO.
- Integrated BLE and Android Nearby Connections API for device-to-device communication across native and Flutter layers.
- Implemented solutions for Dynamic Forms, Web Route Management, and end-to-end API Encryption/Decryption using platform channels.
- Worked extensively with packages: ObjectBox, flutter_downloader, pointycastle, kiosk mode, flutter_azure_tts, and more.

Mobile Developer Intern · Kody Technolabs Limited

Jun 2023 – Sep 2023 | Ahmedabad, India

- Developed UI and integrated APIs for a Soccer Card Trading app and a Restaurant Reservation app using MVVM + DDD architecture.
- Gained hands-on experience with Riverpod, Dio, GetIt, Hive, SQLite, Socket.IO, ScreenUtils, and Responsive Builder.

Flutter Developer Intern · Iconflux Technologies

Mar 2023 – Jun 2023 | Ahmedabad, India

- Built a competitive exam preparation app with study materials, mock tests, and performance analytics for government exam aspirants.

KEY PROJECTS

Synclt Platform (Sensit Technologies) — Flutter · Melos · BLoC · Hive · REST APIs · Windows · Android · iOS

- Enterprise monorepo platform replacing multiple legacy tools; developed Lite (offline-first) and Plus (cloud-connected enterprise) variants from a single shared codebase.
- Includes device communication, log parsing SDK, data visualisation, firmware management, scheduled reporting, and multi-format export.

Dasher (Delivery Robot) — Flutter · Android Native · ROS SDK · BLE · Platform Channels · Firebase · Socket.IO

- Multi-panel delivery robot platform with 9 integrated applications; led Main Panel (robot control via ROS SDK) and Advertisement Panel (dynamic content + remote scheduling).
- Implemented BLE communication and Nearby Connections API for real-time device coordination.

Medigo (Healthcare App) — Flutter · BLE · Medigo SDK

- Patient-facing app connecting to medical devices via Bluetooth for blood pressure and ECG tracking, with medication reminders and health alerts.

Vault (Personal Project) — Flutter · BLoC · Hive · GoRouter · Offline-First

- Fully offline personal inventory tracker targeting Android, iOS, Windows, macOS, and Linux with a custom design system and loosened MVVM architecture.

EDUCATION

B.E. in Information Technology

2020 – 2023

SAL College of Engineering, Ahmedabad · SPI: 7.5
